Project: Comprehensive Omics Catalogue for Hartwell

St. Jude Children's Research Hospital BioHackathon Team 1

Date started: 09/04/2024 Date completed: 9/06/2024 Report generated: 16:57:33 CDT
09/11/2024

1 Information about this notebook

This is an exploratory analysis of the data availability in terms of assays in the Comprehensive Omics Catalogue for Hartwell. This is critical for mitigating duplicate sequencing requests and efforts through Hartwell. This notebook aims to showcase: (1) which samples have already been sequenced by Hartwell, and (2) what omics data are available per sample.

For demo purposes, we use dummy data cohort and subset by human brain tumor samples. Finally, we investigate the number of samples per `cancer_type_brain`, Assay and longitudinal.

2 Set up

```
suppressPackageStartupMessages({  
  library(tidyverse)  
})
```

3 Directories and paths to file Inputs/Outputs

```
attach(params)
```

```
## The following object is masked _by_ .GlobalEnv:
```

```
##
```

```
##      root_dir
```

```
analysis_dir <- file.path(root_dir, "analyses", "data-exploratory-analysis")
```

```
input_dir <- file.path(analysis_dir, "input")
```

```
# We will first read in metadata file as we need to define sample_name
```

```
metadata_file <- file.path(input_dir, input_file) # metadata input file
```

```
palette_file <- file.path(root_dir, "figures", "palettes", "assay_color_palette.tsv")
```

```
tumor_palette_file <- file.path(root_dir, "figures", "palettes", "tumor_color_palette.tsv")
```

```
longitudinal_palette_file <- file.path(root_dir, "figures", "palettes", "longitudinal_color_palette.tsv")
```

```
# File path to `plots` directory
```

```
plots_dir <- file.path(analysis_dir, "plots")
```

```
figures_plots_dir <- file.path(plots_dir, "figures-longitudinal")
```

```
if (!dir.exists(figures_plots_dir)) {
```

```
  dir.create(figures_plots_dir)}
```

```
source(paste0(analysis_dir, "/util/function-create-barplot.R"))
```

```
source(paste0(root_dir, "/figures/scripts/theme_plot.R"))
```

4 Read metadata file

We will subset by human brain tumor samples.

```
# Read metadata
```

```
df <- read.csv(metadata_file, stringsAsFactors=FALSE)
```

```
# Number of samples per cancer_type_brain
```

```
assays_number <- length(df$SJUID)
```

```
samples_number <- length(unique(df$SJUID))
```

```

cancer_type_brain_order <- cancer_type_order
longitudinal_order <- disease_stage_order

# Re-order df
f <- assay_order
df <- df %>%
  dplyr::mutate(Assay = factor(Assay),
                Assay = fct_relevel(Assay, f),
                longitudinal = factor(longitudinal),
                longitudinal = fct_relevel(longitudinal, longitudinal_order)) %>%
  arrange(cancer_type_brain, longitudinal, Assay)

```

4.1 Color palette for plotting

```

# Read color palette
palette_df <- readr::read_tsv(palette_file, guess_max = 100000, show_col_types = FALSE)

# Define and order palette
palette <- palette_df$hex_codes
names(palette) <- palette_df$color_names

# Read color palette for tumor type
tumor_palette_df <- readr::read_tsv(tumor_palette_file, guess_max = 100000, show_col_types = FALSE)

# Define and order palette
tumor_palette <- tumor_palette_df$hex_codes
names(tumor_palette) <- tumor_palette_df$color_names

# Read color palette for longitudinal
longitudinal_palette_df <- readr::read_tsv(longitudinal_palette_file, guess_max = 100000, show_col_types = FALSE)

# Define and order palette
longitudinal_palette <- longitudinal_palette_df$hex_codes
names(longitudinal_palette) <- longitudinal_palette_df$color_names

```

5 Number of samples with assay information

Table 1: Summary of samples per assay

Assay	n
WES	148
WGBS	80
WGS	148

8 Future directions

The current exploratory data analysis module can be expanded by investigating samples with paired assays. Moreover, if other metadata are available, e.g., disease_stage, treatment, this will build large, longitudinal cohorts with multi-omic sequencing data. Such an analysis permits consideration of samples according to the condition(s) of the experiment and research aims. In addition, it can be used to refine research questions and/or generate new ones.

This will facilitate collaboration across departments at St. Jude, expedite discoveries, and find cures for

children with cancer and other catastrophic diseases.
