## Project: Comprehensive Omics Catalogue for Hartwell

### St. Jude Children's Research Hospital Bio<br/>Hackathon Team ${\bf 1}$

Date started: 09/04/2024 Date completed: 9/06/2024 Report generated: 13:39:07 CDT 09/06/2024

#### 1 Information about this notebook

This is an exploratory analysis of the data availability in terms of assays in the Comprehensive Omics Catalogue for Hartwell. This is critical for mitigating duplicate sequencing requests and efforts through Hartwell. This notebook aims to showcase: (1) which samples have already been sequenced by Hartwell, and (2) what omics data are available per sample.

For demo purposes, we subset by human brain tumor samples. We investigate the number of samples per cancer\_type\_brain and Assay.

### 2 Set up

```
suppressPackageStartupMessages({
  library(tidyverse)
  library(flextable)
})
```

## 3 Directories and paths to file Inputs/Outputs

```
## The following object is masked _by_ .GlobalEnv:
##
## root_dir
analysis_dir <- file.path(root_dir, "analyses", "data-exploratory-analysis")

# We will first read in metadata file as we need to define sample_name
metadata_file <- file.path(analysis_dir, "input", input_file) # metadata input file

# File path to `results` directory
results_dir <- file.path(analysis_dir, "results")
if (!dir.exists(results_dir)) {
    dir.create(results_dir)}</pre>
```

#### 4 Read metadata file

We will subset by human brain tumor samples.

```
Source == "Human") %>%
select(Source, Disease, Assay, Omics.Method.Detail, Site, Sub.Group, cancer_type_brain)
```

#### 4.1 Generate SJUID

We will generate random SJUID per brain cancer type as this information is not contained in the current data.

```
# Make this reproducible
set.seed(2024)
# create vector of data$Sample.SJUID with some duplicates
generate_string <- function(length) {</pre>
  chars <- c(LETTERS, LETTERS, 0:9)
  pasteO(sample(chars, length, replace = TRUE), collapse = "")
# Create a smaller set of unique strings, each starting with "SJH"
unique_strings <- paste0("SJH", sapply(1:80, function(x) generate_string(8)))
# Sample from this set to create a vector of 100 strings, allowing duplicates
SJUID <- sample(unique_strings, 100, replace = TRUE)
# Generate vector for `cancer type brain`
cancer_type_brain_vec <- c("Ependymoma", "HGG", "LGG", "Medulloblastoma")</pre>
n <- 25 # random number
cancer_type_brain <- rep(cancer_type_brain_vec, each=n)</pre>
# Assign `SJUID` to `cancer_type_brain`
bind_df <- cbind(SJUID, cancer_type_brain) %>%
  as.data.frame()
# Merge both df
df <- project_df %>%
  left_join(bind_df, by = "cancer_type_brain", relationship = "many-to-many") %>%
  unique() %>%
  mutate(match_id = paste(SJUID, Assay, sep = "_")) %>%
  distinct(match_id, .keep_all = TRUE) %>%
  write_tsv(file.path(results_dir, "cohort.tsv")) # save
# Number of samples per cancer_type_brain
assays_number <- length(df$SJUID)</pre>
samples_number <- length(unique(df$SJUID))</pre>
```

#### 4.2 Number of samples with assay information

There are 60 brain tumor samples with 261 assays in total.

#### 4.3 Number of assays per brain cancer type

Table 1: Summary of assays per brain cancer type

| cancer_type_brain | n   |
|-------------------|-----|
| Ependymoma        | 120 |
| HGG               | 28  |
| LGG               | 102 |
| Medulloblastoma   | 11  |

## 5 Number of samples per Assay

| Assay            | n  |
|------------------|----|
| Methyla-<br>tion | 60 |
| RNAseq           | 49 |
| ChIPseq          | 37 |
| WES              | 37 |
| WGS              | 37 |
| ATACseq          | 21 |
| WGBS             | 20 |

## 6 Number of samples per brain cancer type and Assay

| can-<br>cer_type_b        | ATACseq | ChIPseq | Methyla-<br>tion | RNAseq | WES | WGBS | WGS |
|---------------------------|---------|---------|------------------|--------|-----|------|-----|
| LGG                       | 21      | 17      | 17               | 13     | 17  |      | 17  |
| Ependy-<br>moma           |         | 20      | 20               | 20     | 20  | 20   | 20  |
| HGG                       |         |         | 12               | 16     |     |      |     |
| Medul-<br>loblas-<br>toma |         |         | 11               |        |     |      |     |

## 7 Number of samples per brain cancer type, Assay, and SJUID

| can-<br>cer_typ | SJUID<br>e_brain | ATACseq | ChIPseq | Methyla-<br>tion | RNAseq | WES | WGBS | WGS |

## 8 Future directions

The current exploratory data analysis module can be expanded by investigating samples with paired assays. Moreover, if other metadata are available, e.g., disease\_stage, treatment, this will build large, longitudinal cohorts with multi-omic sequencing data. Such an analysis permits consideration of samples according to the condition(s) of the experiment and research aims. In addition, it can be used to refine research questions and/or generate new ones.
